

THE EDGE

MENU SYSTEM BY
INTERNATIONAL PATTERNS INCORPORATED

What Is The Edge Menu System?

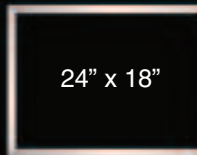

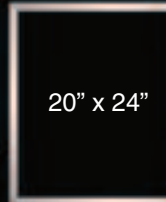

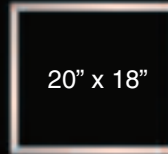

The EDGE menu board utilizes state of the art LED illumination.

This has many benefits:

- The bright even light of LEDs makes transparencies display clearly & beautifully.
- Thin circuitry allows us to create a light box which is only 1" deep.
- The EDGE menu board uses only 20% of the electricity that a fluorescent bulb would use.
- LEDs have a useful life measured in the tens of thousands of hours which yields enormous savings when compared to fluorescent bulbs.
- LED's are truly environmentally friendly. Not only do these menu boards use much less electricity but they have no mercury in them as do fluorescent bulbs.
- While the light output is brilliant, the LED's give off no heat. Your images last longer since LED's do not emit UV rays which yellows transparencies.
- Easy copy changes using snap-lock frames.
- The EDGE is manufactured in the UNITED STATES in our factory in Bay Shore, NY.
